teach me if command in python assume i am 10 year old child

The `if` Command in Python

Imagine you're a robot, and someone gives you instructions like:

"If it's raining, take an umbrella."

That's exactly what `if` does in Python — it makes a **decision**!

The Basic Idea

```
python

if something is true:
    do this thing
```

Example 1 — Are you old enough?

```
python

age = 12

if age >= 10:
    print("You are old enough to ride the roller coaster!")
```

Output:

```
You are old enough to ride the roller coaster!
```

Python checks: *"Is age bigger than or equal to 10?"* → YES → so it prints the message!

Adding `else` — What if it's NOT true?

`else` means "otherwise, do this instead"

```
python
```

```
age = 7

if age >= 10:
    print("You can ride!")
else:
    print("Sorry, you are too young.")
```

Output:

Sorry, you are too young.

Adding `elif` — Checking MORE options 🔍

`elif` means "else if" — like checking a second question!

```
python

score = 75

if score >= 90:
    print("Amazing! You got an A! 🌟")
elif score >= 70:
    print("Good job! You got a B! 😊")
elif score >= 50:
    print("You passed! You got a C.")
else:
    print("Don't give up! Try again. 💪")
```

Output:

Good job! You got a B! 😊

Python goes through each question **one by one** and stops at the first one that's true.

💡 Think of it like a flowchart

```
Is score >= 90?
  ✓ YES → print "A"
  ✗ NO → Is score >= 70?
          ✓ YES → print "B"
          ✗ NO → ...and so on
```

Quick Cheat Sheet 📄

Word	Meaning
<code>if</code>	Check if something is true
<code>else</code>	Do this if nothing was true
<code>elif</code>	Check another condition

🎮 Try it yourself!

```
python
favorite_color = "blue"

if favorite_color == "red":
    print("Red is fiery! 🔥")
elif favorite_color == "blue":
    print("Blue is cool like the ocean! 🌊")
else:
    print("That's a great color too!")
```

Change `"blue"` to your favorite color and see what happens! 🎨

The `if` command is like giving Python a **brain to make choices** — and now you know how to use it! 🧠 ✨

teach me for loops assume i am 10 years

`for` Loops in Python 🔄

Imagine you have 5 cookies 🍪 and you want to eat them one by one. You wouldn't say:

"Eat cookie 1, eat cookie 2, eat cookie 3..."

You'd say: ***"Eat each cookie, one at a time!"***

That's exactly what a **for loop** does — it repeats something **for each item!**

The Basic Idea

```
python
```

```
for item in collection:
    do something with item
```

Example 1 — Eating Cookies 🍪

```
python

cookies = ["chocolate", "vanilla", "strawberry", "oreo", "butter"]

for cookie in cookies:
    print("Eating the", cookie, "cookie! Yum!")
```

Output:

```
Eating the chocolate cookie! Yum!
Eating the vanilla cookie! Yum!
Eating the strawberry cookie! Yum!
Eating the oreo cookie! Yum!
Eating the butter cookie! Yum!
```

Python goes through **each cookie**, one by one, and runs the code for every single one!

Example 2 — Using `range()` to Count 1 2 3 4

`range()` is like telling Python "count from here to there"

```
python

for number in range(1, 6):
    print(number)
```

Output:

```
1
2
3
4
5
```

⚠️ **Sneaky rule:** `range(1, 6)` counts 1 to 5 — it stops *before* 6!

Example 3 — Your Friends' Names 👤

```
python

friends = ["Emma", "Liam", "Sophia", "Noah"]

for friend in friends:
    print("Hello,", friend, "! 🗨️")
```

Output:

```
Hello, Emma ! 🗨️
Hello, Liam ! 🗨️
Hello, Sophia ! 🗨️
Hello, Noah ! 🗨️
```

Example 4 — Multiplication Table 📊

```
python

for number in range(1, 11):
    print("5 x", number, "=", 5 * number)
```

Output:

```
5 x 1 = 5
5 x 2 = 10
5 x 3 = 15
...
5 x 10 = 50
```

Imagine doing that by hand! The loop does it in a flash! ⚡

Example 5 — Combining `if` and `for` 🔥

Remember `if`? We can use it **inside** a loop!

```
python

numbers = [3, 7, 2, 9, 4, 6, 1]

for number in numbers:
    if number > 5:
        print(number, "is BIG! 💪")
    else:
        print(number, "is small. 🥰")
```

Output:

```
3 is small. 🐭  
7 is BIG! 💪  
2 is small. 🐭  
9 is BIG! 💪  
4 is small. 🐭  
6 is BIG! 💪  
1 is small. 🐭
```

🗨️ How to Picture It

```
friends = ["Emma", "Liam", "Sophia"]
```

```
Loop 1 → friend = "Emma" → print "Hello Emma"  
Loop 2 → friend = "Liam" → print "Hello Liam"  
Loop 3 → friend = "Sophia" → print "Hello Sophia"  
      (no more friends)  
      STOP! 🛑
```

Quick Cheat Sheet 📋

Code	What it does
<code>for x in list</code>	Go through each item in a list
<code>range(5)</code>	Count 0, 1, 2, 3, 4
<code>range(1, 6)</code>	Count 1, 2, 3, 4, 5
<code>range(0, 10, 2)</code>	Count 0, 2, 4, 6, 8 (skip by 2!)

🎮 Try it Yourself!

```
python  
  
# Print every planet in our solar system!  
planets = ["Mercury", "Venus", "Earth", "Mars",  
           "Jupiter", "Saturn", "Uranus", "Neptune"]  
  
for planet in planets:  
    print("🪐 Planet:", planet)
```

Change the list to your favorite movies, games, or foods and see what happens! 🚀

A `for` loop is like a **robot helper** that does the same job over and over so **you don't have to!** 🤖 ✨

while loops in python plz teach me i am 10 years old

`while` Loops in Python 🔁

Remember `for` loops? They repeat a **set number of times**.

But what if you don't know how many times you need to repeat? That's where `while` loops come in!

The Basic Idea

A `while` loop says:

"KEEP doing this... AS LONG AS something is true!"

```
python

while something is true:
    keep doing this
```

Real Life Example 🎮

Imagine playing a video game:

*"Keep playing **while** you have lives left!"*

When you run out of lives → **GAME OVER** → loop stops! 🛑

Example 1 — Counting to 5 1234

```
python

number = 1

while number <= 5:
    print(number)
    number = number + 1
```

Output:

```
1
2
3
4
5
```

Python keeps asking: *"Is number still less than or equal to 5?"*

-  YES → print it, add 1, repeat!
-  NO → STOP!

Example 2 — Eating Pizza 🍕

```
python

slices = 5

while slices > 0:
    print("Eating a slice... slices left:", slices)
    slices = slices - 1

print("Pizza is all gone! 🤖")
```

Output:

```
Eating a slice... slices left: 5
Eating a slice... slices left: 4
Eating a slice... slices left: 3
Eating a slice... slices left: 2
Eating a slice... slices left: 1
Pizza is all gone! 🤖
```

Example 3 — Guessing Game 🎯

```
python
```

```
secret_number = 7
guess = 0

while guess != 7:
    guess = int(input("Guess the number: "))
    if guess == secret_number:
        print("🎉 You got it!")
    else:
        print("❌ Wrong! Try again!")
```

The loop keeps going **until you guess correctly!**

Nobody knows how many tries it will take — that's why `while` is perfect here!

Example 4 — Rocket Countdown 🚀

```
python

countdown = 10

while countdown > 0:
    print(countdown, "...")
    countdown = countdown - 1

print("🚀 BLAST OFF!")
```

Output:

```
10 ...
9 ...
8 ...
...
1 ...
🚀 BLAST OFF!
```

⚠️ The DANGER — Infinite Loops! 🤖

What if you **forget** to change the number? The loop runs **FOREVER!**

```
python
```

```
# 🚨 DANGEROUS CODE! Don't run this!
number = 1

while number <= 5:
    print(number)
    # Oops! We forgot to add 1!
    # This runs FOREVER and ever...
```

This is called an **infinite loop** — like a hamster on a wheel that never stops! 🐹

Always make sure your loop can stop!

The `break` keyword — Emergency Exit! 🛑

`break` lets you **escape** a loop immediately!

```
python

number = 1

while True:
    print(number)
    number = number + 1
    if number > 5:
        break          # ESCAPE! 🛑

print("Loop is done!")
```

Output:

```
1
2
3
4
5
Loop is done!
```

🧠 How to Picture It

```
slices = 5
```

```
Check → Is slices > 0? ✓ YES → eat slice → slices = 4
Check → Is slices > 0? ✓ YES → eat slice → slices = 3
Check → Is slices > 0? ✓ YES → eat slice → slices = 2
Check → Is slices > 0? ✓ YES → eat slice → slices = 1
Check → Is slices > 0? ✓ YES → eat slice → slices = 0
Check → Is slices > 0? ✗ NO → STOP! ●
```

for vs while — Which one to use? 🤔

for loop

while loop

Use when	You know how many times	You don't know how many times
Example	Print 5 names	Keep guessing until correct
Stops when	List runs out	Condition becomes false

🎮 Try it Yourself!

```
python

# How many times can you say hello?
times = 1

while times <= 3:
    print(times, "- Hello there! 🙋")
    times = times + 1

print("Done saying hello! 😊")
```

Try changing `3` to any number and watch it go! 🎉

A `while` loop is like a **bouncer at a door** 🚪 — it keeps letting things through **as long as the rules are met**, and stops the moment they're not! 💪 ✨

mata sinhalen kiyala deepan oya thunama if,for loops,while loops mata
wayasa thama 10i thhawama

Python - If, For, While - සිංහලෙන්

1 **if** කියන්නේ මොකක්ද? 🤔

හිතන්න ඔයා සෙල්ලම් කරනවා. අම්මා කිව්වා:

"වැස්ස ආවොත් ඇතුලට එන්න!"

ඒකමයි **if** කරන්නේ! යම් දෙයක් ඇත්ත නම්, මේ වැඩේ කරනවා!

```
python
```

```
වයස = 12
```

```
if වයස >= 10:  
    print("ඔයාට රෝලර් කෝස්ටර් එකේ යන්න පුළුවන්! 🎢")
```

ඔයාට රෝලර් කෝස්ටර් එකේ යන්න පුළුවන්! 🎢

else - "නැත්නම්" 😊

```
python
```

```
වයස = 7
```

```
if වයස >= 10:  
    print("යන්න පුළුවන්! ✅")  
else:  
    print("සමාවෙන්න, ඔයා තම පොඩ්මයි! ❌")
```

සමාවෙන්න, ඔයා තම පොඩ්මයි! ❌

elif - "නැත්නම් මේකද?" 🤔

```
python
```

```

ලකුණු = 75

if ලකුණු >= 90:
    print("සුපිරි! A ගත්තා! 🌟")
elif ලකුණු >= 70:
    print("නියමයි! B ගත්තා! 😊")
elif ලකුණු >= 50:
    print("සමත්! C ගත්තා! 👍")
else:
    print("කරදර නෑ! ආයෙ උත්සාහ කරන්න! 💪")

```

නියමයි! B ගත්තා! 😊

💬 මතක තියාගන්න:

වචනය

අදහස

if

නම් - යම් දෙයක් ඇත්ත නම්

else

නැත්නම් - ඒක බොරු නම්

elif

නැත්නම් මේකද - තව condition එකක්

2 for loop කියන්නේ මොකක්ද? 🔄

හිතන්න ඔයාට කැම පෙට්ටියේ බිස්කට් 5ක් තියෙනවා. ඔයා එකින් එක කනවා නේද?

ඒකමයි for loop! ලිස්ට් එකේ හැම දෙයක්ම එකින් එක ගන්නවා!

python

```
බිස්කට් = ["මාරි", "ගෝල්ඩ්", "වොකලට්", "කෝකිස්", "දිවුරාල්"]
```

```
for බිස්කට්_කැල්ල in බිස්කට්:
    print("කනවා:", බිස්කට්_කැල්ල, "😊")
```

කනවා: මාරි 😊

කනවා: ගෝල්ඩ් 😊

කනවා: වොකලට් 😊

කනවා: කෝකිස් 😊

කනවා: දිවුරාල් 😊

range() - ගණන් කිරීමට 1
2
3
4

python

```
for අංකය in range(1, 6):  
    print(අංකය)
```

1
2
3
4
5

⚠ මතක තියාගන්න: `range(1, 6)` කියන්නේ 1 ඉඳන් 5 වෙනකන් — 6 ඇතුළත් නෑ!

යාළුවන්ට හෙලෝ කියයි! 👋👋

python

```
යාළුවෝ = ["කමල්", "නිමල්", "සුනිල්", "රනිල්"]
```

```
for යාළුවා in යාළුවෝ:  
    print("හෙලෝ", යාළුවා, "! 🙌")
```

හෙලෝ කමල් ! 🙌

හෙලෝ නිමල් ! 🙌

හෙලෝ සුනිල් ! 🙌

හෙලෝ රනිල් ! 🙌

5 වල එකතු කිරීමේ වගුව 📊

python

```
for අංකය in range(1, 11):  
    print("5 x", අංකය, "=", 5 * අංකය)
```

5 x 1 = 5

5 x 2 = 10

5 x 3 = 15

...

5 x 10 = 50

💡 මතක තියාගන්න:

යාච්චෝ = ["කමල්", "නිමල්", "සුනිල්"]

වට 1 → යාච්චා = "කමල්" → හෙලෝ කමල්

වට 2 → යාච්චා = "නිමල්" → හෙලෝ නිමල්

වට 3 → යාච්චා = "සුනිල්" → හෙලෝ සුනිල්

(ඉවරයි!) → නවතනවා! 🟡

3 **while** loop කියන්නේ මොකක්ද? 🔄

for loop ගණන් දැනගෙන කරනවා.

while loop කරන්නේ "ඒ දෙය ඇත්ත තාක් කල් කරනවා!"

"ජීව ගණන් ඉවර වෙනකන් ගේම් කෙලෙව්!"

Pizza කෑවා 🍕

python

කැල්ල = 5

```
while කැල්ල > 0:
    print("කනවා... ඉතිරි:", කැල්ල)
    කැල්ල = කැල්ල - 1

print("පිසා ඉවරයි! 🤖")
```

කනවා... ඉතිරි: 5

කනවා... ඉතිරි: 4

කනවා... ඉතිරි: 3

කනවා... ඉතිරි: 2

කනවා... ඉතිරි: 1

පිසා ඉවරයි! 🤖

රොකට් ගමන 🚀

python

```
ගණන = 5

while ගණන > 0:
    print(ගණන, "...")
    ගණන = ගණන - 1

print("🚀 යන්න!")
```

```
5 ...
4 ...
3 ...
2 ...
1 ...
🚀 යන්න!
```

⚠ අනතුර - නවකින්ගේ නැති loop! 🤖

```
python

# 🚨 මේක කරන්න එපා!
අංකය = 1

while අංකය <= 5:
    print(අංකය)
    # අංකය වෙනස් කරන්නේ නෑ!
    # සදාකාලීයම ධාවනය වෙනවා! 🐛
```

හාවා රෝදයේ දූවනවා වගේ — කවදාවත් නවකින්ගේ නෑ! 🐭

🏆 තුනම එකට!

	if	for loop	while loop
කරන්නේ	නිර්ණ ගන්නවා	ලිස්ට් එකේ හැම එකක්ම	ඇත්ත තාක් කල්
උදාහරණ	වැස්ස ආවොත්	හැම යාළුවාටම හෙලෝ	Pizza ඉවර වෙනකන්
රොබෝ වගේ	🤖 "ඒකද?"	🤖 "හැමදේම කරන්නම්"	🤖 "ඇත්ත නම් කරන්නම්"

🎮 ඔයාම උත්සාහ කරන්න!

```
python
```

```
# ඔයාගේ ප්‍රිය දේවල්!  
ආහාර = ["කිරිබත්", "ලමප්‍රයිස්", "කොන්කු", "ඉඬිලි"]  
  
for කෑම = in ආහාර:  
    if කෑම == "කොන්කු":  
        print(කෑම, "- මේක ලස්සනම! ❤️")  
    else:  
        print(කෑම, "- මේකත් හොඳයි! 😊")
```

ලිස්ට් එකේ ඔයාගේ ප්‍රිය ආහාර දාලා බලන්න! 🍽️

ඔයා දැන් Python රොබෝ කෙනෙකුට කියන්නේ කොහොමද කියලා දන්නවා! 🤖 ✨
හොඳට ඉගෙන ගන්න! ඔයා නියමයි! 🌟

📄 🔊
